## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement filed Feb. 02, 2005 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Drawings***

The drawings are objected to because “walls 17” is not shown in the drawings. In Fig. 4, two different structures are labeled “12”. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

The disclosure is objected to because of the following informalities: on page 10 reference number 29 is used to describe 2/2 valves and a pressure gauge.

Fig. 6 shows reference RF and 62 which are not described in the specification.

Appropriate correction is required.

***Claim Objections***

Claims 1, 11, 14, and 16 are objected to because of the following informalities: The structure of "target portion of the substrate" is unclear because Fig. 2 seems to indicate that target portion C is a section of the fluid chamber 11.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-13 and 16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Regarding claim 1, 11 and 16, the simultaneous or partially simultaneous exposure/projecting and fluid processing is not adequately disclosed in the specification. The

Art Unit: 2851

sequence of whether the exposure or projection took place first or at the same time as the fluid processing is not fully disclosed.

Regarding claim 11, processing of an area exposed to fluid but does not include the target portion is not adequately described in the specification.

In view of above discussed objections and rejections, the following art rejection is based on the examiner's best understanding of the claims.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Garner et al. (Garner) (2002/0041420).

Garner discloses a lithographic projection apparatus and a device manufacturing method comprising a radiation system (12), a patterning structure (34) configured to pattern the projection beam; a substrate table configured to hold a substrate (24), a projection system (22) and a fluid processing cell in communication with a surface of a substrate (36, 48), the fluid processing cell comprising a plurality of separate chambers (Fig. 3, ref. 46), and different areas of the substrate subject to different fluid or exposure process simultaneously (Fig. 3).

Garner discloses a plate member (64) having walls and contacting the substrate. Garner discloses fluid inlet and outlet (Fig. 3, ref. 50, 52).
